

SNOMASTER COMMERCIAL ICE MACHINE INSTALLATION REQUIREMENTS

COMMERCIAL ICE MAKER INSTALATION

- Make sure the ice bin and unit are installed level (With SM80S unit must tilt slightly towards the wall)
- Supplied inline filter must be installed (depending on water quality, the filter cartridge needs to be replaced every 3 to 6 months)
- Minimum of 2bar water pressure is required for water inlet valve to open sufficiently
- If OR water filter system is used, production capacity will be affected
- The ice maker needs its own dedicated plug point. (15-amp socket) With a 20-amp single phase circuit breaker. (Do not run any other appliance on the same line i.e. freezer)
- Do not use any extension cord, as low voltage will also damage electronics
- Do not run the unit off a generator
- Supplied drain pipes must be installed on the main machine and bin (pipes should run at a downward angle as water is drained by gravity)
- All units are pretested before being dispatched.

WARRANTY:

- All commercial units have a 3-year warranty on manufacturing defects
- On site repairs will be carried out within a 100-kilometre radius of nearest certified Snomaster service agent.
