*Note: We recommend a certified plumber installs these Commercial Ice-Makers. These units have a gravity-fed drain point, thus the drain point must be lower than the Ice-Maker. Ensure to keep the units well ventilated. Ensure to clean the condenser regularly. \*To maximize the Ice-making performance of our plumbed-in ice-makers, it's ideal to have them in a steady environment with a 20°C ambient temperature and 10°C water temperature. While our Ice-makers can handle higher temperatures, these conditions ensure peak production capacity.*
