SIDE BY SIDE Series

H680SIT

Large Capacity

Get more storage out of the same space

Hisense's large capacity refrigerators ensure that you store any shapes, sizes, or types of food, meeting all your weekly shopping needs. Comfortably fit up 543L at once.

PureFlat Door Design

Simplicity that breeds creativity

The premium appearance with flat door design and recessed handles makes better use of space and creates a modern aesthetics look.

Durable Inverter

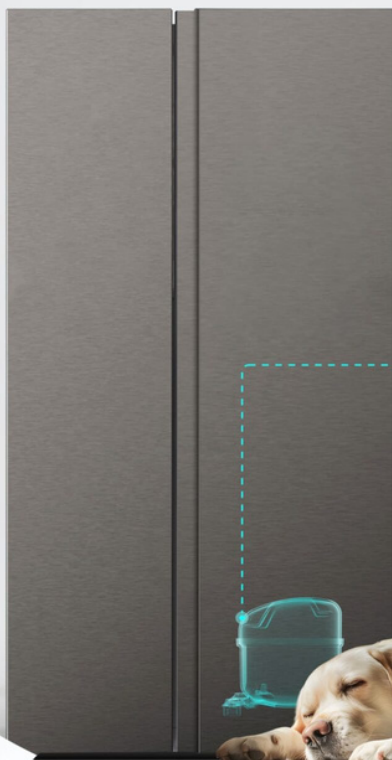

For a lasting appliance that saves energy

Fridges with Inverter Technology can help you save energy, and in turn save your money. Inverter Technology monitors the conditions inside your fridge and manages the output accordingly. It also ensures a more stable internal temperature, which helps extend the life of your appliance.

 Low Noise

 Money Saving

Flat Duct

Maximize your Space, Minimize your Hassle

The flat duct design of our refrigerator allows for optimal use of interior space, providing more storage capacity for all your needs. The design also simplifies the internal structure of the refrigerator, making cleaning and maintenance a breeze.

General

Multi Airflow

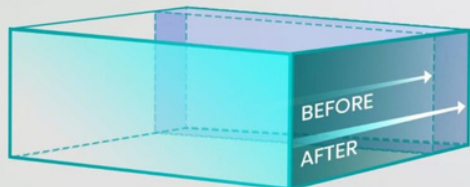

Upgraded

XXL Door Balcony

Extra storage, with room to spare

Hisense's XXL door balcony is the solution for taller items. It provides the perfect space to store bulkier items. The wide shelf can handle any challenge and allows you quick access to items you use most frequently.

Big Box

Big on Size, Big on Freshness

The big box compartment provides you with enough space to store large items while allowing you to make the best use of the available space. Storing big items is effortless with the maximum space-saving design.

Super Cool

Quickly Cool Freshly Stored Goods

The super cool feature can quickly drop and maintain the fridge temperature to 2 °C, allowing stored food to be rapidly chilled. With this feature, food will stay fresh longer while beverages will be quickly cooled for drinking.

Super Freeze

Maintain the quality of your frozen food

When it's time to stock up your freezer with new food, using the super freeze function, which will rapidly drop the temperature to -24°C and generate cold air.

Multi Airflow

Surround your food with freshness

Thanks to the even distribution of cold air achieved by the smart Multi Airflow System, the optimal temperature is consistently maintained throughout your refrigerator. It helps keep your food chilled to perfection no matter where it is placed.

Total No Frost

Never manually defrost again

More advanced than ordinary frost-free, the innovative Total No Frost Technology from Hisense enables circulation of cold air evenly throughout your freezer, preventing frost build-up, and eliminating the need to ever manually defrost again.

Digital Temperature Sensor

Perfect readings from every corner

Multiple highly-effective Digital Temp Sensors are built into the refrigerator (as shown here), which are engineered to optimally adjust the cooling level of the fridge.

Soft LED Lights

Brighter and more efficient

Brighter and more efficient than standard fridge bulbs, LED lighting illuminates the contents of your fridge but remains soft on the eyes. More importantly, it also saves energy.
